

STELLAR CINEMAS

Website Planning & Documentation Report

1.1 Website objective and business goals

Stellar Cinemas is a multiplex cinema brand based in Gaborone, Botswana. The primary objective of this website is to serve as the official digital presence for the cinema, enabling customers to discover current and upcoming films, purchase tickets online, and engage with the brand's promotions and loyalty programmes without having to physically visit the box office.

According to studies, a well-defined website objective aligns directly with measurable business goals. For Stellar Cinemas, the website aims to achieve the following business goals:

- **Increase Revenue:** Drive online ticket sales by offering a seamless, end-to-end booking experience without requiring physical box-office visits.
- **Improve Customer Information Access:** Publish accurate, up-to-date screening schedules and movie listings to keep audiences informed and reduce missed showings.
- **Strengthen Brand Identity:** Position Stellar Cinemas as Botswana's premier cinema experience through consistent, premium branding that reflects the quality of the in-theatre experience.
- **Enhance Customer Engagement:** Allow customers to provide feedback and enquiries directly through the website, reducing call-centre load and improving responsiveness.
- **Grow the Customer Database:** Capture leads for loyalty programme sign-ups and promotional newsletters through the feedback and contact form.

1.2 Target Audience

The target audience for the Stellar Cinemas website is defined through demographic analysis and an understanding of digital behaviour among Botswana's urban population, particularly in Gaborone

Primary Audience

- **Age Range & Location:** Urban residents of Gaborone and surrounding areas, aged 16–35.
- **Occupation:** Predominantly students (secondary school, tertiary education) and young working professionals.
- **Gender:** Mix of male and female audiences; family groups are a secondary sub-segment for weekend screenings.

- **Income Level:** Lower-to-middle income earners; price-sensitive and responsive to promotional offers such as student discounts.
- **Technical Aptitude:** Moderate-to-high. Most users access the internet primarily via smartphones (Android is dominantly used in Botswana). Desktop use is secondary, common among office workers.

Secondary Audience

- **Families:** Families with children aged 5–12 seeking weekend entertainment
- **Tourists:** Tourism visitors to Gaborone seeking leisure activities.

1.3 Type of website content

The content categories are defined as follows:

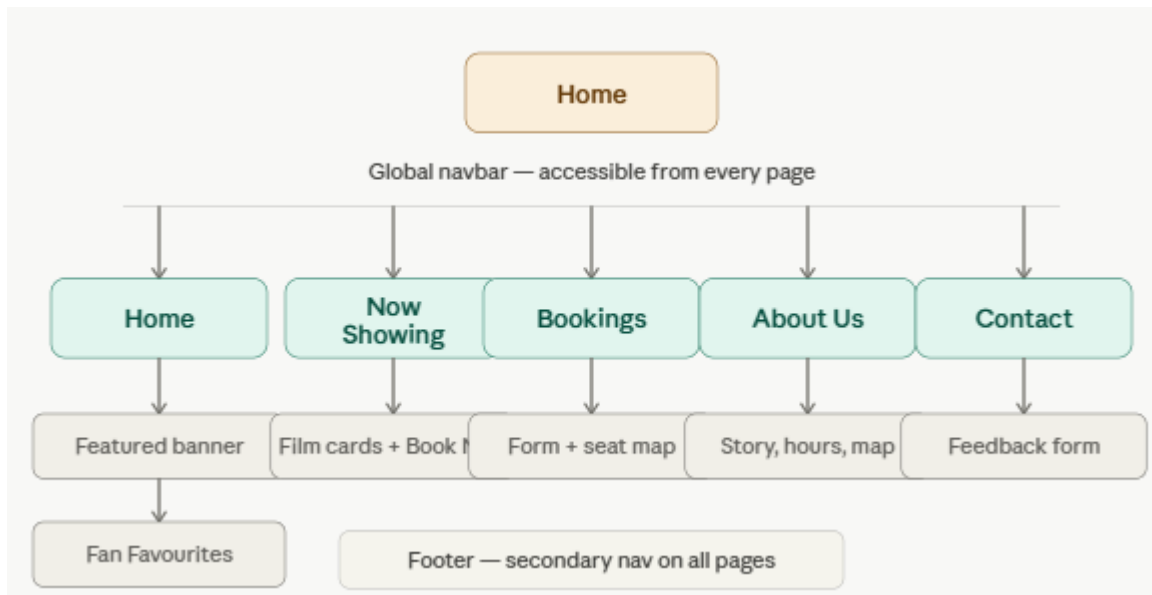

- **Movie Listings:** Current and upcoming film listings genre tags, duration and age ratings.
- **Online Booking & Feedback Form:** An interactive booking/feedback form including seat availability.
- **Promotions & Offers:** Pricing, loyalty programme details, and special promotional offers.
- **Location, Contact & About us:** Branch location, opening hours, contact details, and a Google Maps embed.

2.1 Information design & taxonomy

Information architecture: The structure of the website adheres to the 3 clicks rules meaning that no page requires more than three clicks to reach from the homepage. There 5 different pages on the Stellar Cinemas website, which are; Home, Now showing, Bookings, About Us and the Contact page.

The navbar on every page links to all five pages. Book Now buttons on every film card link directly to bookings.html. The footer provides secondary navigation to all primary pages.

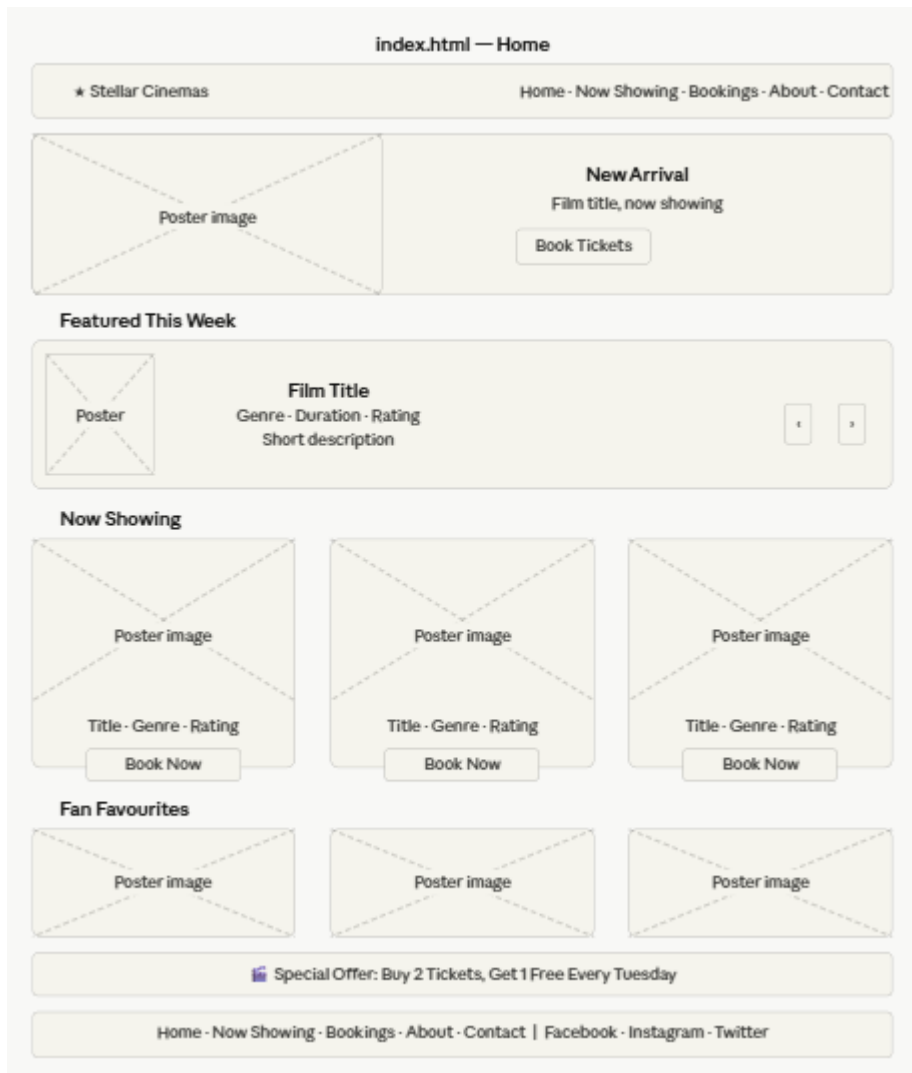

Site map

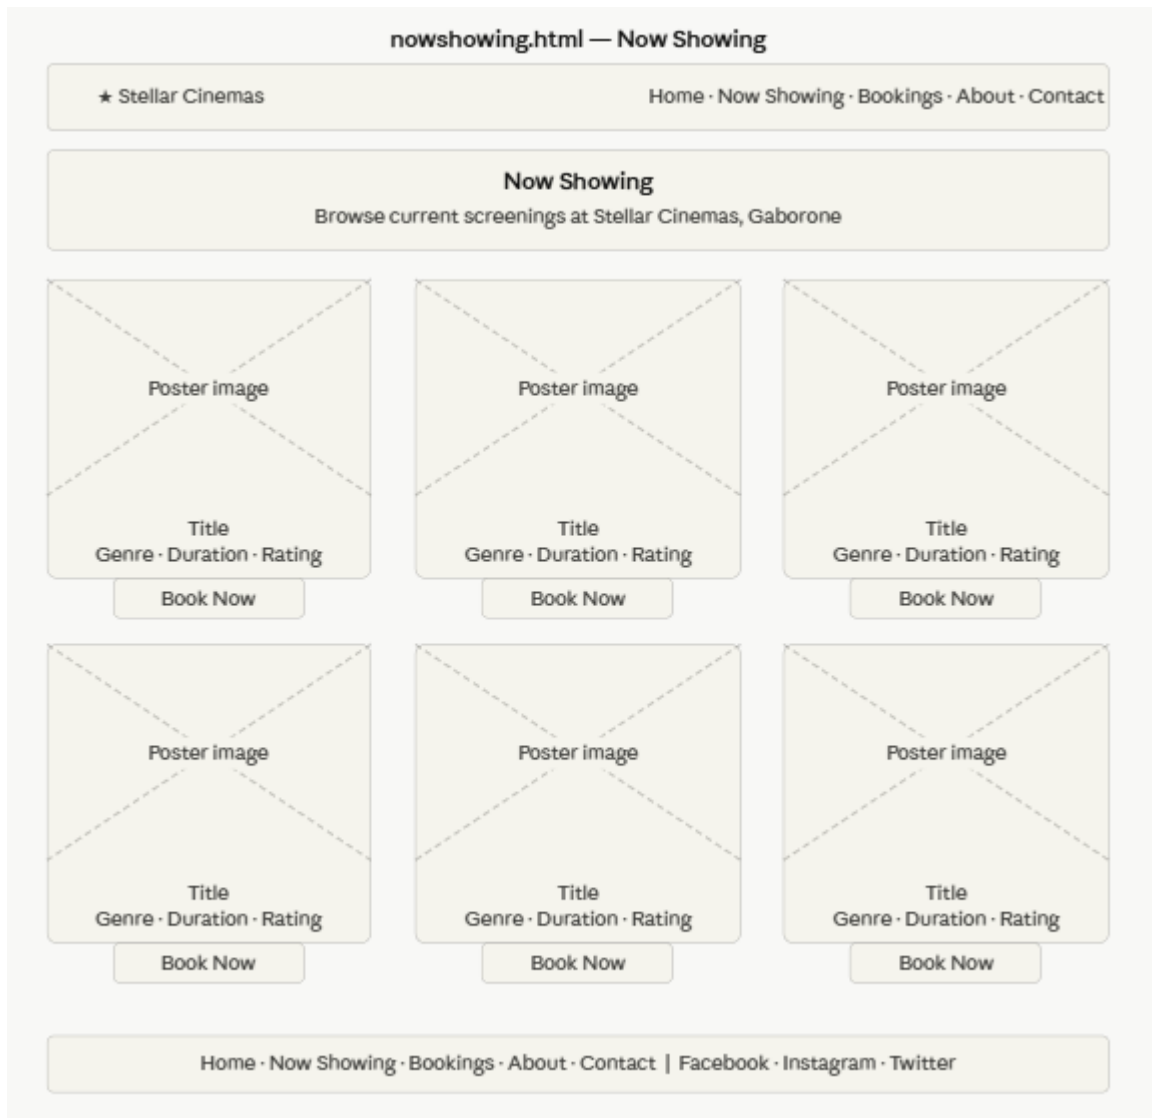

All five main pages are accessible from the global navigation bar present on every page. The footer provides secondary navigation links to all primary pages.

To ensure uniformity, all 5 pages share the following structure:

- **Shared Stylesheet:** All pages use the same external CSS file for visual consistency.
- **Footer:** Footer with navigation links, social media links and copyright notice.
- **Header and navigation bar:** A black fixed top navigation bar with a logo. The active page is highlighted with a yellow background.
- **Shared colour scheme throughout the website.**
- **Font choice:** The primary font is Arial, which is a universally available system font. This ensures legibility across all devices and browsers.

4. Technical brief

The technologies and resources to be used in the development of the website include

	Tool	Purpose
Markup	HTML5	Semantic structure of all web pages including forms, media elements, and accessibility attributes.
Styling	CSS3	Single external stylesheet for all visual design
Scripting	JavaScript	Interactive behaviours: booking form validation, carousel controls, seat selection.
Code Editor	Visual Studio Code	Primary IDE with extensions: Live Server, Prettier, HTML CSS Support, GitHub integration.
Framework	Bootstrap	Linked in the head section of html pages and customised to fit website needs
Browser Testing	Chrome, Firefox, Edge, Samsung browser, Opera	Cross-browser compatibility testing to ensure consistent rendering across all major browsers.
Validation	W3C Validator	Validating HTML5 and CSS3 code to ensure W3C standards compliance.

5. Quality assurance

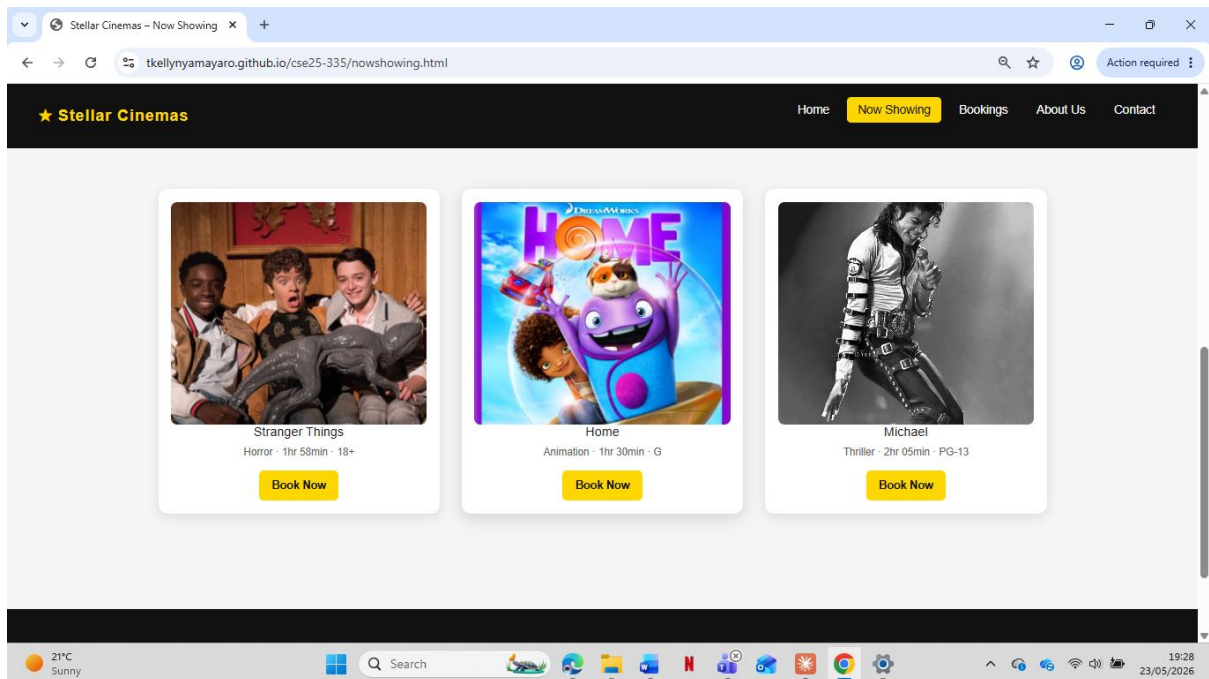

5.1 Browser Compatibility Testing

The website was tested across three different browsers to verify consistent rendering and functionality.

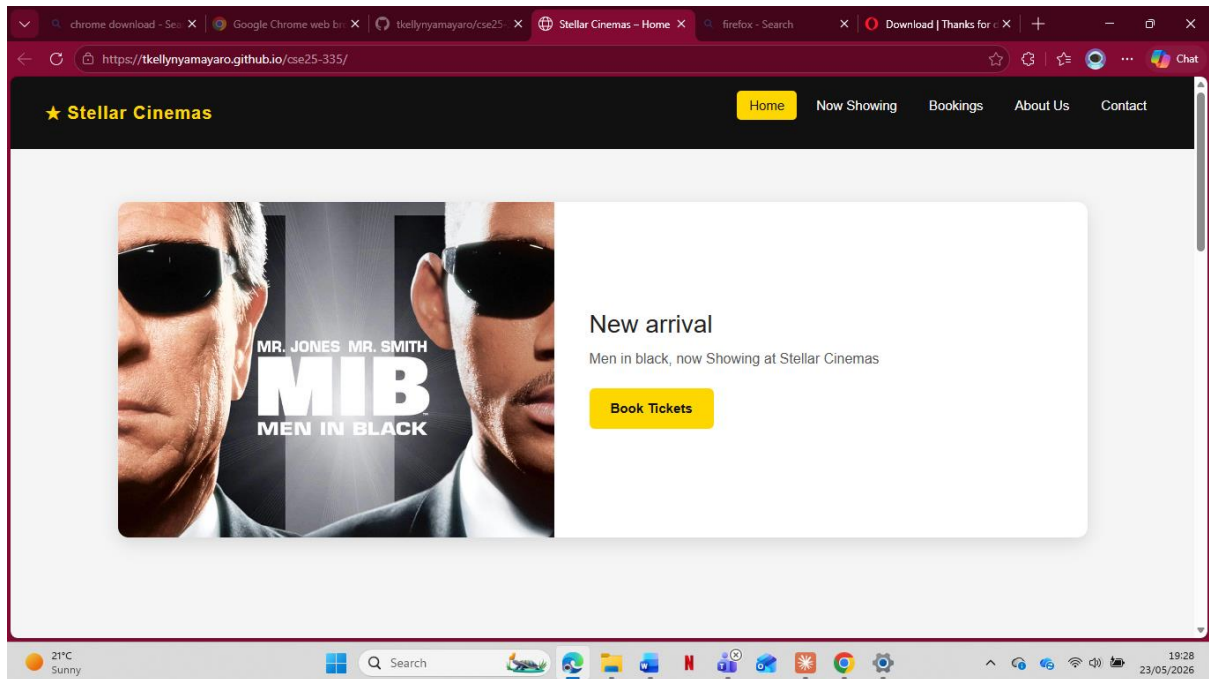

Browser	Version Tested	Result	Notes
Google Chrome	Latest	Pass	All features working correctly; primary development browser

Microsoft Edge	Latest	Pass	Fully compatible; forms and seat map function correctly
Opera browser	Latest	Pass	Fully compatible

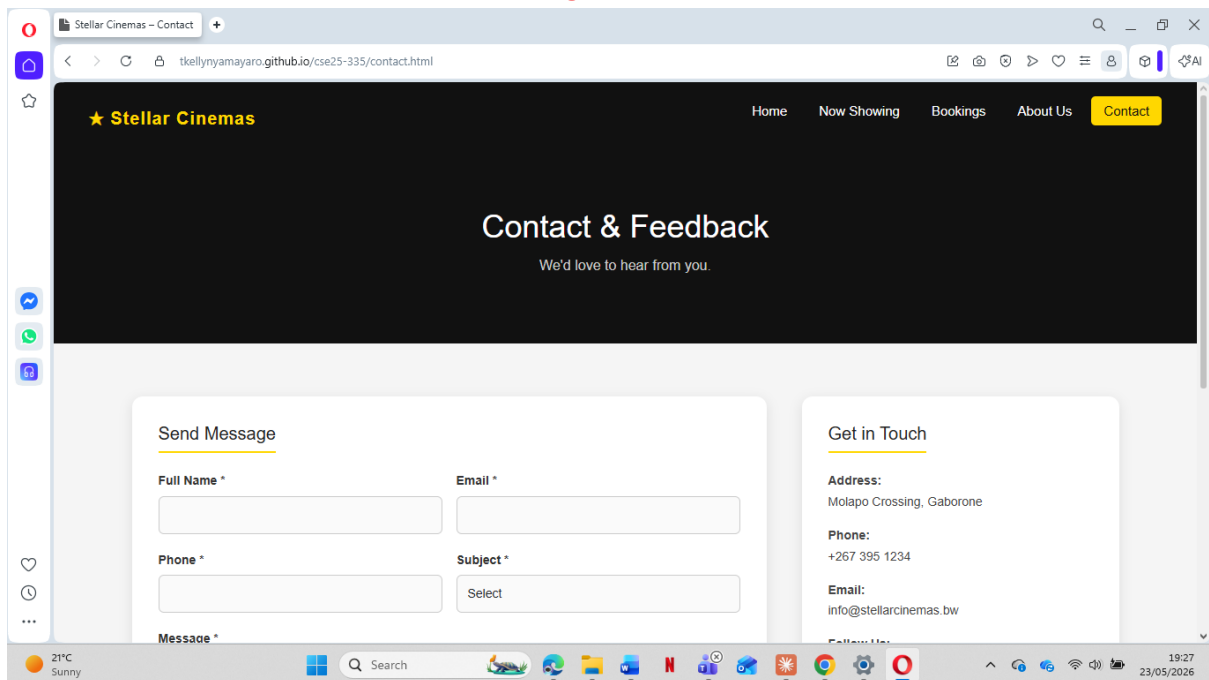

Below is a screenshot of the Now showing page when viewed on Chrome Browser.

Below is a screenshot of the Home page when viewed on Microsoft Edge browser.

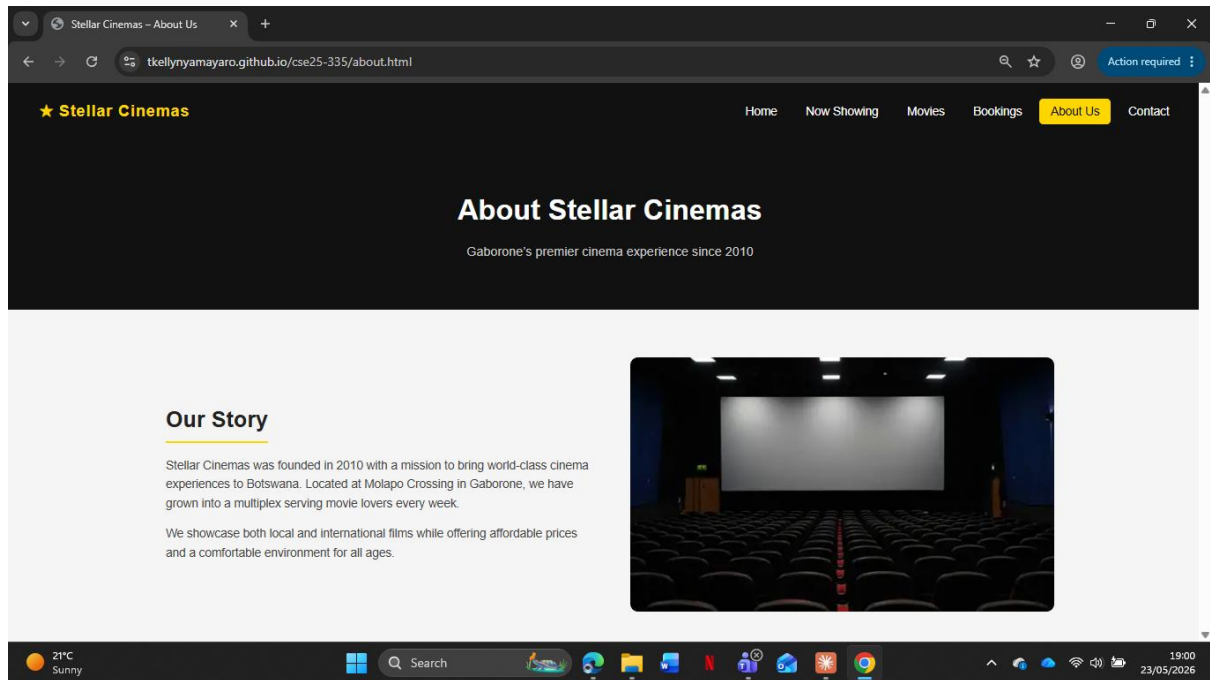

Below is a screenshot of the Contact page when viewed on the Opera browser.

5.2 Mobile & Responsive Testing

The website was tested using Chrome DevTools toolbar (F12 on the keyboard) across three screen sizes.

- **Below is the desktop view of the About page on a Dell Latitude 7290 Laptop.**

- Below is a simulation of the Bookings page as if it were to be viewed on a Samsung A51/71 device.

5.3 HTML & CSS Validation

All HTML pages were validated using the W3C Markup Validation Service at validator.w3.org. Here is a screenshot taken of the validation of the index page

Nu Html Checker

This tool is an ongoing experiment in better HTML checking, and its behavior remains subject to change

Use the Message Filtering button below to hide/show particular messages, and to see total counts of errors and warnings.

Message Filtering

1.

Warning

Section lacks heading. Consider using `h2` - `h6` elements to [add identifying headings to all sections](#), or else use a `div` element instead for any cases where no heading is needed.

From line 106, column 1; to line 106, column 30

OPTION --><<section class="promo-banner"><<

5.4 Link Testing

All internal navigation links were manually tested across all five pages. Results:

- All navbar links navigate correctly on every page
- Book Now buttons on all film cards navigate to bookings.html
- Footer links verified on all five pages
- No broken links found

6. Publishing & Promotion

6.1 Hosting Platform

The Stellar Cinemas website is hosted on GitHub Pages, a free static site hosting service provided by GitHub. Files are served directly from a public GitHub repository, making it accessible to anyone with the URL.

The project files (HTML, CSS, JavaScript, and images) were uploaded directly to the GitHub repository using the GitHub web interface instead of Git commands through the terminal.

The hosting process involved:

- Creating a repository on GitHub
- Uploading the website files directly through the “Add file → Upload files” option
- Enabling GitHub Pages in the repository settings under **Pages**
- Selecting the main branch as the deployment source

Once deployed, GitHub automatically generated a public website link.

7. Future developments or recommendations

The following improvements are recommended for future development:

- **Backend Integration:** The booking form currently captures user details and displays a confirmation message using a JavaScript confirmation message when the user captures details and displays a confirmation message, but no data is stored or processed. A future version could integrate a server-side backend such as node.js and send confirmation emails.
- **Online Payment Processing:** Integrating a local payment option such as Orange Money would allow customers to pay for tickets at the time of booking.
- **User Accounts and Booking History:** A login and registration system would allow returning customers to view their booking history and manage upcoming bookings.
- **Movie Search and Filter:** Adding a genre and rating filter on the Now Showing page using JavaScript would allow users to quickly find films matching their preferences.
- **Image Optimisation:** Converting all movie poster images to WebP format and using the loading="lazy" attribute would reduce page load times, which is important for mobile users in Botswana.
